

The Day Has Come – an internet-connected air filter monitor!

FleetFilter now has available the HDA100 air filter monitor made by Senzit for WIX Filtration (Mann+Hummel). And before you freak out about the senselessness of a Bluetooth monitor, let me tell all that it does. It does more than just send you a notification that your air filter is dirty!

The Senzit HDA100 monitor:

- Uses cellular service to provide data to a centralized database which you can access via the Senzit App. No subscription fees.
- Provides air filter condition in real-time – replace the air filter when it needs it, not when it might need it.
- Tracks engine hours for more accurate service intervals.
- Provides automatic updates on filter life expectancy.
- Offers GPS location tracking for the vehicle which is helpful for managers and assistance in theft-tracking.
- With the installed app, any user(s) can quickly view the needs of their ENTIRE fleet, giving fleet managers the ability to turn downtime into *planned* downtime.

- In addition, any older vehicle can be brought into the 21st century with real-time tracking. Turn an old truck into a connected vehicle!

Naturally, the best use of a product like this is for construction and agriculture companies who utilize multiple trucks and equipment who need a good, real-time tracking system for vehicle usage, filter wear, GPS tracking, and planning repair schedules. But some DIY'ers may just love the connectivity of the data to monitor through their phones!

A few questions and answers:

Q: **Can I use any air filter with the Senzit monitor?**

A: *You can use any brand air filter with the Senzit monitor.*

Q: **Do I have to use the downloadable app to view the data?**

A: *Yes, you do – the app is available in the Apple app store or the Google Play store.*

Q: **How does Senzit broadcast information?**

A: *The Senzit monitor has a built-in cellular connection which sends information to the mobile app installed on one phone or installed on many phones.*

Q: **How do you install the Senzit?**

A: *The monitor is installed in the air filter box and needs to be wired to any fused switched ignition source. Do not connect it directly to the battery. The operating temperature is -13°F to 175°F. Read the User and Installation Manual [here](#).*

Q: **Does Senzit come with a warranty?**

A: *The WIX Filtration standard one-year warranty applies.*

FleetFilter.com now stocks these WIX Filtration Senzit units!

They are listed on FleetFilter for **\$179.99**, but you'll automatically get a 10% discount so it's really only **\$161.97**. And if you increase your order to buy over \$200.00 of any products, the 20% discount kicks in and the price becomes **\$143.98**.
